It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Insert size: 157000; agarose-fp

It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

(1996-1997)
http://ftp.genome.washington.edu/RM/RepeatMasker.html.
hNOTE: This is a 'working draft' sequence. It currently a consists of 27 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as a runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence as soon as it is available and the accession number will
                        Gaps

```
a modified polylinker; Site_1: Not I; Site_2: ECO RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NHL1)W, testis NHT, and B-cell NCI_CGAP_GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297486-302087, 682632-687239, 726408-72871, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

a modified polylinker: Site_l: Not I: Site_2: Eco R;
a modified plasmid DNA from three normalized
libraries (fetal lung NbHL19W, testis NHT, and B-cell
NGL_GAP_GCBL) were mixed, and ss circles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hybridization reaction. The driver
was pcR-amplified cDNAs from pools of 5,000 clones made
from the same 3 libraries. The pools consisted of
I.M.A.G.E. clones 297480-302087, 682632-687239,
726408-728711, and 729906-731399. Subtraction by Bento
Soares and M. Fetima Bonaldo. "

circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 985608-986759, 1101192-1101959, and 1217928-1220615). Subtraction by Bento Soares and M. Fatima Bonaldo. " a 149 c lif g 236 t 2 others

Anote="Crgan: mixed (see below): Vector: pT7T3D-Pac

(Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Ecor RI: Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5.000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223,
340488-345479, and 444488-489479."

/note="Organ: pooled; Vector: pT713D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I: Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHY, and B-cell NCI_CGAP_GCBI) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo.

EST is putatively homologous to ATPase 1 (PIR, A44396) in
Flasmodium falciparum with 50% (5 amino acids overlapped) identity.
Seq primer: Mi3 Reverse/5K primer.

The sequence tag present in the CDNA between the NotI site and the
Oligo-dr track served to identify it as a clone from the normalized
adult 8-Day-Embryo library. CDNA Library Preparation: M. Fatima
Bonaldo, Ph.D. Clone distribution: clones will be available through
Research Genetics
Seq primer: M13 Forward.

// note="Vector: pSPORT1; Site_1: Not1; Site_2: Sall; 1st
strand cDNR was primed with a Not1: Oligo(dT)15 primer
[5/pGACTACTTCTRGATGCGAGCGCCCCTTTTTTTTTTTTTT];
double-stranded CDNA was ligated to Sal I adaptors (BRL),
digested with Not 1 and cloned into the Not I and Sal I
sites of the pSPORT1 vector (BRL). Library was constructed
by Matthew Clark (Lehrach lab; ICRF, London and Max Planck
Institut fuer Molekulare Genetik, Berlin). CDNAs for EST
analysis were selected following oligonucleotide
hybridization fingerprinting of arrayed clones from
zebrafish late somitogenesis (26 ss), adult liver or
embryonic shield stage (5.6 h) libraries. Fingerprint
data were used to computationally cluster cDNAs, and a
single CDNA from each cluster was chosen for sequencing.
In some cases multiple members of the same cluster were
sequenced to assess clustering parameters or single clones
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       fc09b07.x1 Zebrafish WashU MPIMG EST Danio rerio cDNa 3' similar to contains element TAR1 repetitive element;, mRNA sequence.

[Abd Ard Mas Primed With a Not I - oligo(dT) Is primer

[Abd Ard TradfTCGCAGCGCCCTTTTTTTTTTTT]

[Abd Ard Mas Injated to Sal I adaptors (BRL),

digested with Not I and cloned into the Not I and Sal I

sites of the pSPORTI vector (BRL). Library was constructed

by Matthew Clark (Lehrach lab: ICRF, London and Max Planck

Institut fuer Molekulare Genetik, Berlin). cDNAs for EST

analysis were selected following oligonucleotide

hybridization fingerprinting of arrayed clones from

zebrafish late somitogenesis (26 ss), adult liver or

embryonic shield stage (5.6 h) libraries. Fingerprint

data were used to computationally cluster cDNAs, and a

single cDNA from each cluster was chosen for sequencing.

In some cases multiple members of the same cluster were

sequenced to assess clustering parameters or single clones

were sequenced additional times to assess quality
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

//ncte="Vector: pSPORT! (Life Technologies); Site_1: Not I;
Site_2: Sal I; This cDNA library was constructed from mRNA
isolated from immature seed coats (200-300 mgs) of
greenhouse grown plants. The library was prepared using
the Life Technologies pSuperScript cDNA library
construction kit. Complementary DNA was synthesized from
mRNA using a poly (dT) sequence with a Not I restriction
site. Sal I linkar adapters were ligated to the
blunt-ended cDNA fragments followed by Not I digestion.
The CDNA fragments were directionally cloned into the Not
I'sal I restriction site of the pSpORTI vector. The
ligated cDNA fragments were transformed into E.coli
ElectroMax DH10B host cells (Gibco BRL). This library was
constructed by Dr. Lila Voktin and Dr. Anu Khanna."

**ALSURE_TYPE="TO SOBLICE EMBLYOS, AGULT LIVELS, SHIELD STAGE EMBLYOS, AGULT LIVELS, SHIELD STAGE EMBLYOS, AGULT LIVELS, SHIELD STAGE "XLI-blue MRF"

**ADED-host="XLI-blue MRF"

**ATEARD CDNA was primed with a Not I - oligo(d7)15 primer |

**Exand CDNA was planed with a Not I - oligo(d7)15 primer |

**Exand CDNA was ligated to Sal I adaptors (BRL), digested with Not I and cloned into the Not I and Sal I sites of the pSPORT1 vector (BRL). Library was constructed by Matthew Clark (Lehrach lab; ICRF, London and Wax Planck Institut fuer Molekulare Genetik, Berlin). CDNAs for EST analysis were selected following oligonucleotide hybridization fingerprinting of arrayed clones from zebrafish late somitogenesis (26 ss), adult liver or embryonic shield stage (5.6 h) libraries. Fingerprint data were used to computationally cluster CDNAs, and a single cDNA from each cluster was chosen for sequencing In some cases multiple members of the same cluster were sequenced to assess clustering parameters or single clones were sequenced additional times to assess quality
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tumor Gene Index
